

Better hygiene for better long-term care

Tork hygiene solutions are easily integrated into your care home, or assisted living facility, to improve hygiene management and efficiency, and give residents more independence. This saves your staff time and creates a safer, happier home for everyone.

70% of care staff agree that if hygiene dispensers were easier to use, more elderly people could use them independently

74% of care staff agree that empty hygiene dispensers are an infection control risk

Delivering dignified care

Infection prevention and wellbeing

- Touch-free dispensers reduce the spread of bacteria and viruses
- Flexible wipers allow staff to thoroughly clean and disinfect surfaces
- Convenient hand-hygiene solutions support good cleaning habits and show your commitment to safety and healthy living. Solutions include soaps, hand sanitisers and adherence signage

Staff efficiency and resident experience

- Easy-to-use designs and dispensers with the lowest pull force of any high-capacity hand-wiping system encourage good hand hygiene and increase accessibility
- Award-winning, modern dispenser designs with whisper-quiet operation feel homely, not institutional
- Attractive, sustainable products improve your image and help attract new residents

Tork Clean Hands Training for Care Homes

Developed with world-leading hand-hygiene experts, Tork educates care home staff about the importance of hand hygiene, glove use and how to manage hand hygiene in stressful situations

Tork Cleaning Training for Care Homes

Trains care home staff on the importance of environmental cleaning, the associated challenges and the most effective cleaning strategies

For improving hygiene and preventing infections, Tork offers a full range of solutions. From skin-kind hand soaps and sanitisers, to colour-coded microfibre cloths that help reduce cross-infection transmission, as part of your cleaning practices.

For improved accessibility and resident independence, Tork offers solutions that are easy to use and have a wide range of placement options. They support residents who have limited strength and find it difficult to operate dispensers which require the pulling of levers, or tearing of tissue.
